Problem Overview

How might we ?

reduce the environmental impact of online shopping, including excessive packaging, transportation emissions, and product returns, sustainable choices?

Secondary Insights

Goal Gather foundational data and narrow the problem scope.

1

Reusable packaging is awesome for the planet, but it's tough to make it work with online shopping because of returns and shipping.

2

Seaweed and cornstarch are great for packaging, but they cost more than plastic.

3

Lots of online shoppers return stuff, especially clothes. This makes it hard to manage reusable packaging.

4

Use less packaging, recycle, offer rewards for returning things, and be clear about how sustainable your packaging is.

5

Some people don't know about sustainable packaging, or they just want things cheap.

Secondary Insights

Survey Overview

The survey aimed to understand consumer behavior and awareness around the environmental impact of online shopping. It explored shopping frequency, return habits, and attitudes toward sustainability, including concerns like packaging waste, carbon emissions, and fast fashion. It also assessed willingness to make eco-friendly trade-offs, such as waiting longer for deliveries, using minimal packaging, or paying for carbon-neutral shipping.

Survey Insights

1

Shopping Habits:

Most shop monthly; clothing & fashion is the top category.

2

Decision Factors:

Price, brand reputation, and product quality matter most.

3

Environmental Awareness:

Majority are somewhat aware; packaging waste is the top concern.

4

Sustainability Willingness:

Many are open to recyclable packaging and slower delivery if it helps the environment.

5

Carbon-Neutral Shipping:

Most would consider it if the cost is reasonable.

Suggestions:

Reduce packaging, promote local sellers, offer eco-friendly delivery options, and give clearer product info.

Primary Insights

Goal To deeply understand consumer behavior and pain points related to fashion shopping

1

Feel Matters More Than Looks

Shoppers prioritize comfort—itchy, stiff, or non-breathable fabrics often lead to dissatisfaction, even if the item looks good.

2

Sizing Online Feels Like a Gamble

Uncertainty around fit leads to hesitation and high return rates.

3

Sustainability Is Desired, but Confusing

Buyers care about eco-friendly fashion but struggle to identify or justify sustainable options.

4

Styling New Clothes Is Challenging

Many users find it hard to mix new pieces with their existing wardrobe.

5

Trust Is Built Through People, Not Brands

User reviews, real photos, and word of mouth carry more weight than ads or polished product images.

Primary Insights

USP

Unique selling proposition

We help you shop smarter by showing clothes on diverse models and using a digital avatar that understands your body shape so you get style suggestions that actually suit you.
